

Project 1

OBJECTIVE:

Act as a UX Researcher and define the target audience.

Create User Personas (Age, goals, frustrations).
Build an Empathy Map (What do they see, think, feel, and do?).

Outcome: A clear understanding of the user before moving to design.

User Painpoint

Time	Users struggle to find 30–60 minutes for exercise.
Consistency	They start routines but have difficulty maintaining them.
Convenience	Traveling to a gym can take too much time.
Decision Fatigue	Users don't know which workout is appropriate for their available time or fitness level.
Motivation	Work stress and tiredness make it easy to skip exercise.
Personalization	Generic workout plans may not fit their schedule, goals, or fitness level.
Work Environment	Many users spend most of the day sitting and need opportunities for movement during work.

User Needs

The fitness app should help users:

- Find workouts based on available time
- Complete workouts in 5–30 minutes
- Exercise without needing a gym
- Receive reminders during the workday
- Choose workouts based on fitness level
- Track progress easily
- Build consistent habits
- Reduce decision-making
- Adapt workouts when their schedule changes

USER PERSONA

Name: Priya — The Health-Conscious Employee

Age: 33

Occupation: Software Engineer

Work Style: Remote / Hybrid

Fitness Level: Beginner

Goals

- Become more physically active
- Reduce back and neck discomfort from sitting
- Improve flexibility and develop healthier daily habits

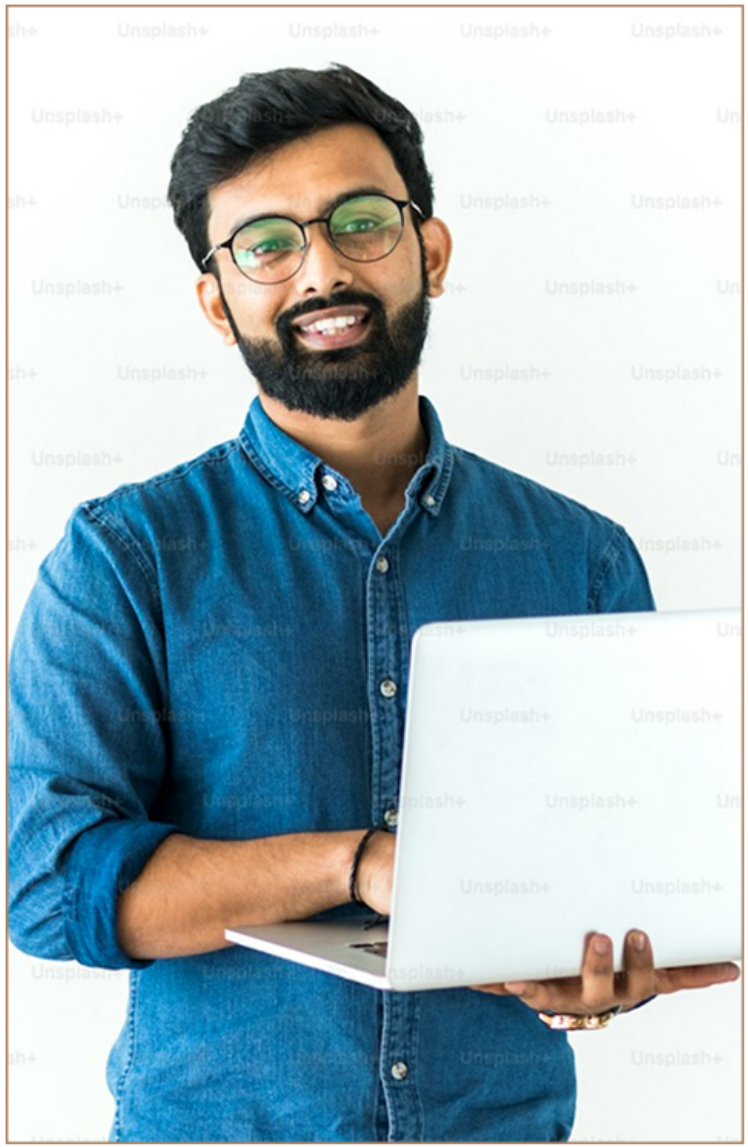

Frustrations

- Doesn't know which exercises are suitable
- Loses motivation when progress is slow
- Finds many fitness apps too intense

Quote

“I don't necessarily need a hard workout.

I just need reminders and simple exercises that fit into my workday.”

USER PERSONA

Name: Michael — The Busy Manager

Age: 38

Occupation: Project Manager

Work Style: Full-time office

Fitness Level: Intermediate

Goals

- Maintain his fitness
- Improve strength and stamina
- Track his progress

Frustrations

- Doesn't want to spend 60–90 minutes at the gym
- Has difficulty planning workouts
- Starts fitness routines but eventually loses consistency

Quote

“I don't need another complicated fitness plan.

I need something I can actually fit into my schedule.”

Key Insights & Summary

Key UX Insight 🔎
The biggest problem is not necessarily a lack of motivation.
For many busy professionals, the problem is the combination of:
Limited Time + Work Stress + Decision Fatigue + Lack of Consistency
Therefore, the app should make exercising feel quick, simple, flexible, and achievable.

Empathy Map Summary

Empathy Area	Key Insight
See 👀	Busy calendars, deadlines, screens, fitness content
Think 💭	"I don't have enough time."
Feel ❤️	Stressed, tired, guilty, but motivated to improve
Do 🏃	Sit for long periods, postpone workouts, try quick routines
Pain 😣	Lack of time, consistency, motivation, and convenience
Need 💡	Short, simple, personalized, flexible workouts

Core User Statement
"Help me exercise in a way that fits into my workday, not something that requires me to completely rearrange my life."

Design Opportunity

How Might We...
How might we help busy office professionals fit simple, effective exercise into their unpredictable workdays?

Potential Product Direction
A fitness app could offer:

- 5, 10, 15, and 30-minute workouts
- "I only have 10 minutes" quick-start option
- Calendar-based workout scheduling
- Desk and office-friendly exercises
- Personalized daily recommendations
- Smart reminders
- Beginner-friendly routines
- Progress tracking
- Workout streaks and habit tracking
- No-equipment workouts
- Flexible rescheduling
